

Automated Storage & Retrieval System – Mini Load

Automated Storage and Retrieval Systems (AS/RS) thrive in applications where high volumes of inventory move in-and-out of manufacturing or distribution operations. Storing with AS/RS means accurate, real-time data is kept on inventory - eliminating need for physical inventory inspections and also providing direct access to items at all times.

To automatically store and retrieve standardized totes or bins, Automated Storage and Retrieval Systems are a proven technology. These systems improve productivity, throughput, operating costs, and accuracy.

Automated Storage & Retrieval System – Mini Load

AS/RS can completely transform your operation. You'll benefit and experience relatively short-term ROI by implanting AS/RS when you:

- Need to reduce labor costs associated with storage and picking
- Labor constraints or expertise is limited
- You have repetitive tasks that can be easily automated
- Long travel times for storing and/or picking
- Need to achieve a better use of space
