# Automated Storage & Retrieval System – Unit Load

Automated Storage and Retrieval Systems (AS/RS) thrive in applications where high volumes of inventory move in-and-out of manufacturing or distribution operations. Storing with AS/RS means accurate, real-time data is kept on inventory – eliminating need for physical inventory inspections and also providing direct access to items at all times.

To automatically store and retrieve standardized pallets, Unit Load Automated Storage and Retrieval Systems are a proven technology. These systems improve productivity, throughput, operating costs, and accuracy.

Automated Storage & Retrieval System – Unit Load

AS/RS can completely transform your operation. You'll benefit and experience relatively short-term ROI by implanting AS/RS when you:

- Need to reduce labor costs associated with storage and picking
- Labor constraints or expertise is limited
- You have high throughput volume with larger/oversized pallets or heavy inventory
- You have repetitive tasks that can be easily automated
- Long travel times for storing and/or picking and palletizing
- Need to achieve a better use or space

Talk to a DAK Project Manager to find out the best application for your system.
