

## K3 End-of-Row Guards

End-of-row guards are heavy steel sections that attach to uprights positioned at the end of a row of pallet rack where forklift traffic is heaviest. Uprights are the most vulnerable parts of the pallet racking and damage to them can increase your risk of rack collapse. A ding with the forklift to the end of a row of your shelving may not seem like a big deal, but it could be the beginning of structural damage to your pallet racks.

Because end-of-row guards see a lot of forklift traffic, they are typically anchored to the floor and often run the full width of the row.

## K3 End-of-Row Guards

K3 End-of-Row Guards are built to protect standard 42" and 48" deep pallet racks.

- 12" tall x 3/8"-thick steel construction
- 5" x 3" x 3/8"-thick steel angle base
- Available in right or left designs
- Installs with 3/4"-dia. anchors (sold separately)
- 42" and 48" lengths in stock

### Features & Benefits:

- Durable, powder-coated construction
- High visibility
- Easy to install
- Made in the USA
- Includes DAK's K3 3-year extended warranty (a (\$295 value))
