

K3 In-Rack Sprinkler Guards

One of the most significant means of ensuring warehouse safety is installing sprinklers throughout the facility to protect against fire. In-rack sprinklers are a great alternative to ceiling-mounted sprinklers because they are installed throughout the racking, positioning them closer to the source of the fire, therefore requiring less water to extinguish the fire.

One downside to in-rack sprinklers is the constant danger of sprinkler heads getting damaged or even broken by employees, contractors, heavy equipment and forklift impact, which can result in gallons of water dumping onto inventory and equipment. K3 in-rack sprinkler guards prevent heavy equipment from getting anywhere near sprinkler heads, protecting sprinkler heads from impacts, and protecting inventory from costly water damage.

K3 In-Rack Sprinkler Guards

K3 In-Rack Sprinkler Guards are made for ultimate protection. Other sprinkler guards that attach directly to some component of your sprinkler system (pipes, fittings, or sprinkler head) can be easily broken and dislodged by heavy machinery, causing severe damage to your sprinkler system. K3 Sprinkler Guards attach to the beams, resulting in safer protection for your sprinklers and your entire system.

Features & Benefits:

- Durable, powder-coated construction
- Easy to install
- Adjustable to fit any space
- Hardware included
- Made in the USA
- High visibility
- Includes DAK's K3 3-year extended warranty (a (\$295 value)
- Available sizes: 10-12", 16-18", 42-44", adjustable 36-54", 6" Single Beam Mounted

Great for the following industries:

- Furniture/Household goods
- Electronics
- Moving & Storage
- Consumer Goods
- Clothing
