

K3 SuperStop

SuperStop is a form of pallet stop, used in combination with DAK's SuperRail, to prevent pallets from being pushed off the rack or pushed in too far and damaging other pallets. They help the pallets sit on the beams squarely. If you have back to back pallet rack, they are used to stop the pallet on one row from hitting the pallet in the row behind.

Often pallet stops are required by insurance companies and fire code if you have back to back pallet rack. In this case, it keeps the pallets from closing the flue space in between the rack. SuperStop is a great, inexpensive alternative to traditional pallet stops on the market.

K3 SuperStop

As pictured above, SuperStop & SuperRail can be use for case or pallet storage.

Specifications:

- Adjustable 0"-4" offset with hardware
- Compatible with most common types of pallet racking
- Can use any column section with side holes with no additional drilling required
- Special hardware available for use with closed-tube columns
- Each superstop comes with (4) 7/16" serrated flange hex head bolts and nuts

Features & Benefits:

- Durable, powder-coated construction
- Easy to install
- Hardware included
- Made in the USA
- High visibility
- Includes DAK's K3 3-year extended warranty (a (\$295 value))
