

Rack & Conveyor Netting

Safety netting protects your inventory, employees, and customers without sacrificing access to loads. Safety nets are an economical way to help prevent falling products or components from high rack bays or overhead conveyors.

Pallet rack safety nets protect personnel from falling objects and preserve your inventory. Order pickers and lift truck errors sometimes cause significant product damage or injuries. Eliminate it by preventing items from falling.

Conveyor safety nets can be installed on overhead conveyors where items can become dislodged and fall from the conveyor. The net provides a soft catch and retains easy visibility of the conveyor.

Rack & Conveyor Netting

Rack and conveyor netting may solve your warehouse problem if:

- You have walkways and/or truck paths directly adjacent to the backside of a row of pallet rack
- Your facility is located in an area with increased seismic activity where product can be shaken loose on the racking
- You consistently experience totes and cartons falling off your conveyor lines
