

Work Platform (Mezzanine)

Work Platforms help you transform unused overhead space into valuable floor space. Designed to fit around your existing columns and machinery, a work platform can help you obtain the greatest amount of usable floor space. Openings and stairways can be located wherever they are needed.

Easy to install, move and expand, work platforms install in days rather than weeks or months and reduce the disruption of your business. Since work platforms function in conjunction with your warehouse racking system, you could end up gaining a great deal of usable space without moving your business. Work platforms can be free-standing, building-supported, rack-supported or shelving-supported and offer solutions for everything from records storage to shelving systems or pre-engineered offices.

Work Platform (Mezzanine)

A work platform may solve your warehouse problem if you:

- Want additional space
- Don't want to move to a larger facility
- Need to add an in-plant office without losing valuable floor space
- Want storage for slow moving items or archived files
- Need a conveyor support platform

Adding work platform levels can be a fast and easy way to double your space and can cost up to 80% less than a building addition. Along with being less expensive initially, work platforms can also qualify for accelerated depreciation, saving you money at both ends of the expansion.

Our work platforms, and all components, are precisely engineered to meet or exceed the standards of major national building and design codes for industrial applications, including AISC, UBC, BOCA, SBCCI, and ACI. The systems can also be designed to meet or exceed the requirements of your local municipal building codes.
